

FOUNDRIY SAND

General Features

Sinter point over 1350°C

Improving surface finish especially in manganese steel casting.

Reduces the surface grinding costs

High thermal shock resistance ,low thermal expansion

Disallow reaction with steel and penetration of molten metal.

High quality clean casting

Improve the bonding with clay usage, reduces the amount of requirement bentonite

Alkaline characteristic

Provides gas permeability and vapour outlet High reusage ratio

Environment friendly.No free silica

Economical solution in comparison with zircon and chromite

Grain sizes (mm)* :

AFS 30-35

AFS 40-45

AFS 50-55

AFS 60-65

AFS 70-75

AFS 80-85

***Can be produced in different sizes & packaging types**

Adab Buisness Center Semnan Industrial Zone Iran
